

Hospital Appointment Management System

Agile Lifecycle

Features of the system

1. Patient registration and login
2. Manage profile
3. View doctor availability
4. Book appointment
5. Automated appointment confirmation
6. Automatic cancellation logic
7. Doctor's dashboard
8. Reschedule appointment
9. Appointment reminder
10. Appointment reports

Prioritized features

1. Patient Registration and Login
2. Book Appointment
3. View Doctor's Availability
4. Automated Appointment Confirmation
5. Doctor's Dashboard
6. Appointment Reminder
7. Auto-cancellation Logic
8. Reschedule Appointment
9. Appointment Reports
10. Manage Profile

Iterations

1) Basic Booking

Goal: Let patients register, log in, view available doctors and book an appointment

Features: Patient registration/login, doctor availability, appointment booking

Tasks: Test registration, login, doctor availability, booking, unavailable time slots, and saved

appointment details

Feedback: Patients and receptionists

2) Reminders and Automation

Goal: Remind patients about appointments, request confirmation, and automatically cancel appointments that are not confirmed or attended

Features: Appointment reminders, automated confirmation, automatic cancellation

Tasks: Test reminders, confirmation, cancellation, and ensure confirmed appointments are not cancelled incorrectly

Feedback: Patients and receptionists

3) Flexibility and Doctor Access

Goal: Allow patients to reschedule appointments and allow doctors to view their appointments and schedules

Features: Reschedule appointment, Doctor's dashboard

Tasks: Build the rescheduling function, allow patients to select a new available time, update appointment details, and create the doctor's dashboard

Testing: Test rescheduling, available time selection, updating appointments, and doctor access to schedules

Feedback: Patients and doctors

4) Improvements and Reporting

Goal: Allow patients to update their information and help the hospital generate appointment reports

Features: Manage profile, appointment reports.

Tasks: build the profile management function, allow patients to update their details, and develop appointment report generation

Testing: Test profile updates, information validation and accuracy of appointment reports

Feedback: Patients and receptionists
